EXECUTIVE SUMMARY & STRATEGIC BLUEPRINT

Product Analytics, Data Readiness & Data Management Blueprint | Task 01

MANDATORY DATA AUTHENTICITY NOTICE: SIMULATED DATA -- CREATED FOR ANALYTICAL TESTING
VELOOP Rewards is an active developing product. All metrics, user records, and event logs analyzed herein are synthetic test cohorts created strictly to evaluate data readiness, schemas, and BI pipelines. They do not represent actual commercial users, revenue, or business performance.

1. Project Context & Analytical Scope

VELOOP Rewards is an emerging micro-earning platform featuring mobile games, rewarded surveys, daily streaks, mining vaults, and social referrals. This report presents the comprehensive findings of the Task 01 Data Analyst Internship, evaluating 18 distinct product domains, 32 user features, and 35,704 simulated telemetry events.

2. Key Analytics & Infrastructure Findings

* **Readiness Scorecard:** The VELOOP data infrastructure currently scores 68/100 (Amber: Sub-Production Readiness), requiring foundational relational hardening.
* **Telemetry Coverage:** Out of 32 mapped features, 17 features (53%) possess simulated event tracking; 15 features (47%) currently operate without database instrumentation.
* **Data Quality Health:** Auditing the 1,008 raw user ingestion dataset uncovered 234 schema defects, including invalid emails (54), negative balances (42), and future timestamps (38).
* **Task Funnel Conversion:** Analysis of 9,846 micro-tasks reveals an overall completion rate of 68.6%, with surveys experiencing high drop-offs due to external verification latency.
* **Referral Virality (K):** Simulated referral tracking yields an organic viral coefficient of K = 0.14, demonstrating the need for enhanced referee onboarding incentives.

3. Core Quantitative Benchmarks (Simulated Test Cohort)

Metric Dimension	Observed Baseline	Industry Standard	Strategic Recommendation
Total Profiled Users	1,000 Users	N/A (Synthetic Cohort)	Deploy automated registration deduplication
Daily Active Users (DAU)	Mean: 222 | Peak: 312	DAU/MAU > 20%	Integrate push notifications for streak resets
Tracked Event Volume	35,704 Events	100+ events/user	Implement JSON schema validation at API gateway
Task Completion Rate	68.6% (6,756/9,846)	Target > 70.0%	Streamline partner offerwall SDK callbacks
Outstanding XP Supply	154,230 XP (Soft)	Balanced Sink/Faucet	Segregate into XP, Gems, and Tokens ledgers
Referral K-Factor	0.14 (Sub-viral)	Target K > 0.80	Introduce 2-sided milestone referee bonuses

4. Strategic Recommendations & Implementation Roadmap

To transition VELOOP Rewards to production scalability, the following 3-phase engineering roadmap is established:

* **Phase 1: Ingestion Hardening:** Implement API schema gating, RFC 5322 email syntax validation, and idempotency key enforcement on all event tracking endpoints.
* **Phase 2: Relational DDL Deployment:** Deploy the proposed 10-table PostgreSQL 15+ schema (schema.sql), migrating standalone rewards, wallet balances, and withdrawals into double-entry ledgers.
* **Phase 3: Executive BI Suite:** Deploy the 10-module Streamlit interactive dashboard with automated alerting for payout queue SLA breaches and fraud detection.
