ANALYTICS READINESS ASSESSMENT

Maturity Audit across 6 Strategic Technical Dimensions | Task 01

MANDATORY DATA AUTHENTICITY NOTICE: SIMULATED DATA -- CREATED FOR ANALYTICAL TESTING
VELOOP Rewards is an active developing product. All metrics, user records, and event logs analyzed herein are synthetic test cohorts created strictly to evaluate data readiness, schemas, and BI pipelines. They do not represent actual commercial users, revenue, or business performance.

1. Enterprise Readiness Scorecard: 68 / 100 (Amber)

A comprehensive diagnostic was conducted across 6 core organizational dimensions. While front-end event tracking concepts are well-defined, critical deficits in back-end transaction ledgers and automated pipeline testing currently place the system in an 'Amber' (Sub-Production) state.

Readiness Dimension	Weight	Score / 100	Status	Identified Critical Gap
Data Collection & Instrumentation	20%	65 / 100	Amber	Missing tracking on 15 product features (Mining, Wallet, Spin)
Relational Schema Maturity	20%	70 / 100	Amber	Absence of dedicated database tables for rewards and withdrawals
Tracking Governance & Taxonomy	15%	75 / 100	Green	Strong event naming standards, needs payload enforcement
Pipeline Infrastructure & SLAs	15%	60 / 100	Amber	No automated ETL, Medallion storage, or DLQ quarantine
KPI Observability & BI Delivery	15%	72 / 100	Green	10-module Streamlit dashboard operational with Plotly visuals
Data Privacy, Security & RBAC	15%	66 / 100	Amber	Unencrypted PII fields, missing role-based access control policies

2. Remediation Priority Matrix

* **P0 (Blocker):** Implement PostgreSQL schema DDL with foreign keys and multi-currency ledgers (XP, Gems, Tokens).
* **P0 (Blocker):** Establish server-side partner postback validation to eliminate fraudulent task completion claims.
* **P1 (High):** Deploy real-time withdrawal SLA queue tracking to keep payout latency under 24 hours.
* **P2 (Medium):** Deploy automated daily dbt test suites and Great Expectations data quality gates.
